**Subset by Category**
**Author:** Autumn Laughbaum, Golden Helix, Inc.

## Overview

This script creates a row subset spreadsheet for each unique entry in a user selected categorical, binary or genotypic column with active data in the spreadsheet.

## Recommended Directory Location

Save the script to the following directory:
*..**\Application Data\Golden Helix SVS\UserScripts\Spreadsheet\Select**

**Note:** The **Application Data** folder is a hidden folder on Windows operating systems and its location varies between XP, Vista, Windows7&8. The easiest way to locate this directory on your computer is to open SVS and go to **Tools > Open Folder > User Scripts Folder**. If saved to the proper folder, this script will be accessible from the spreadsheet **Select** menu.

## Using the Script

From a spreadsheet with active column mapped markers, choose **Select > Subset by Category.**

Select the column that defines your unique categories, Row Labels are selected by default, and click OK.
