

Extract Info from Regression Stats Viewer

Author: Greta Linse Peterson, Golden Helix, Inc.

Overview

This script scans the Regression Statistics Viewer output and prints out the p-value after correcting for any covariates. This script is not meant to be used with moving windows.

Recommended Directory Location

Save the script to the following directory:

*..\Application Data\Golden Helix SVS\UserScripts\SVS\Tools\

Note: The **Application Data** folder is a hidden folder on Windows operating systems and its location varies between XP and Vista. The easiest way to locate this directory on your computer is to open SVS and go to **Tools >Open Folder > UserScripts Folder**. If saved to the proper folder, this script will be accessible from the project navigator **Tools** menu.

Using the Script

1. From the project navigator, select **Tools > Extract Info from Regression Stats Viewer**.
2. Enter in the node ID for the Regression Stats Viewer.

The resulting spreadsheet will have all of the original column regressors as row labels and the p-value after correcting for covariates in the second column.
