

## Subset by Chromosome

**Author:** Autumn Laughbaum, Golden Helix, Inc.

### Overview

This script scans genetic marker mapped columns and creates a subset spreadsheet for each unique chromosome with active data in the spreadsheet.

This tool requires a columnwise marker mapped spreadsheet

### Recommended Directory Location

Save the script to the following directory:

**\*..\Application Data\Golden Helix SVS\UserScripts\Spreadsheet\Select\**

**Note:** The **Application Data** folder is a hidden folder on Windows operating systems and its location varies between XP, Vista, Windows7&8. The easiest way to locate this directory on your computer is to open SVS and go to **Tools > Open Folder > User Scripts Folder**. If saved to the proper folder, this script will be accessible from the spreadsheet **Select** menu.

### Using the Script

From a spreadsheet with active column mapped markers, choose **Select > Subset by Chromosome**.
